Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The invention discloses a new isolated or recombinant nucleic acid which CC encodes a polypeptide having a phytase activity. Also claimed is a claim nucleic acid probe, an amplification primer sequence pair, an expression cassette comprising the nucleic acid, a vector comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the nucleic cacid, a transgenic non-human animal or plant, or its seed, comprising the cardinate of the nucleic acid, an antisense oligonucleotide, inhibiting the polypeptide of a second domain, an array comprising immobilised polypeptide or nucleic acid, a hybridoma comprising an antibody that specifically binds to the polypeptide, a food supplement for an animal, an edible enzyme delivery matrix, an edible pellet comprising a granule edible enzyme delivery colypeptide, a feed composition, a soybean meal, isolating or identifying the polypeptide, which gain anti-phytase antibody, producing a recombinant polypeptide, determining whether a compound binds to the polypeptide, colippetide, whole cell engineering of new or modified the resistance or thermostability of the phytase polypeptide, increasing the resistance of the phytase polypeptide to enzymatic inactivation in a composition and processing of corn and sorghum kernels. The phytase activity comprises catalysis of phytate (myo-inositol-hexaphosphate) to inositol and inorganic phosphate and is thermotolerant. The nucleic acid is useful in improving the feeding value of phytate rich ingredients or as an aid in phytate digestion. The sequence presented is the DNA cancerichia coli phytase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match 100.

improve the feeding value of phytase enzyme can be used in foodstuffs to improve the feeding value of phytate rich ingredients, and in diet of numerous animals including mammals, fowls and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially significant avian species such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as guppy, zebrafish, molly, swordtail, etc., in dough making and baking, in dietary aids for animals. The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is safe for animals. The present
                                                                                                                                                                                                                                                          Producing pencoding p
                                                                                                                                     The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast. The inventions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low pH. The phytase enzyme can be used in foodstuffs to

```
CC least one polypeptide having phytase activity, where the polypeptide is a CC modified sequence (AEE75421) derived from the Escherichia coli K-12 appA CC phytase (AEE75419). The modification of the enzyme, comprising a series CC of mutations, improves the thermal tolerance and protease stability of CC the protein. The specification also claims a pharmaceutical composition; CC a kit; an immobilized phytase; a fertilizer or soil additive; a liquid CC supplement for preventing muscle cramps; a hydrating agent; a tissue CC culture or cell culture media; and a plant food additive, all comprising CC the novel phytase, and a method of reducing pollution and increasing cc nutrient availability in an environment or environmental sample by CC degrading environmental phytic acid. The novel enzyme is a dietary CC supplement useful for treating, preventing or reversing osteoporosis or bone loss, and preventing muscle cramps. The method is useful for reducing pollution cc and increasing nutrient availability in an environment or environmental cc sample by degrading environmental phytic acid, where the environmental cc environmental sample comprises a soil or a body of water. The immobilized cc phytase is useful in foodstuffs for improving the feeding value of CC phytase is useful in foodstuffs for improving the feeding value of CC phytase is useful in foodstuffs for improving the feeding value of CC phytate rich ingredients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches 1308; Conservative

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a recombinant phytase (EC 3.1.2.8) protein and its encoding also nucleic acid molecule. Phytases of the invention is a thermostable protein. They are useful in foodstuffs, for oil degumming, producing an animal feed, delivering a phytase enzyme supplement to an animal, increasing the resistance of a phytase polypeptide to enzymatic inactivation in a digestive system of an animal and in processing of corn and sorghum kernels. The invention is also useful in gene therapy and in production of transgenic animals. The present sequence is the SEQ ID NO: 1 which is given in the sequence listing. This sequence differs from the SEQ ID NO: 1 shown on page 19 in disclosure of the specification (see AED50824).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Short JM,

The present sequence is that of a polynucleotide encoding a novel compodified phytase derived from the Escherichia coli appA protein, with compoditive proved thermal tolerance and protease stability compared to the wild-cipe. The present invention relates to a novel formulation, comprising at compodified sequence (AEE75419) are compodified from the Escherichia coli K-12 appA compodified sequence (AEE75419). The modification of the enzyme, comprising a series of mutations, improves the thermal tolerance and protease stability of the protein. The specification also claims a pharmaceutical composition; a kit, an immobilized phytase; a fertilizer or soil additive; a liquid colluture or cell culture media; and a plant food additive, all comprising nutrient availability in an environment or environmental sample by degrading environmental phytic acid. The novel enzyme is a dietary complement useful for treating, preventing or reversing osteoporosis or bone loss, and preventing muscle cramps. The liquid supplement is useful campis. The method is useful for reducing pollution and increasing nutrient availability in an environment or envi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01-MAR-1999;

Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid 2004-374952/35

SEQ ID NO 6; 74pp; English

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low pH. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytate rich ingredients, and in diet of numerous animals including mammals, fowls and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially

The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is safe for animals. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1901 BP; 472 A; 498 C; 501 G; 429 T; 0 U; 1 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast under conditions that allow CC expression of the enzyme which has improved thermal tolerance and protease CC stability at low pH. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytate rich ingredients, and in diet of CC numerous animals including mammals, fowls and fishes, commercially csignificant mammals such as pigs, goats, laboratory rodents, commercially csignificant avian species such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present CC sequence is Escherichia coli KI2 apph phytase mutant DNA.

                                                                                        ð B
                                                                                                                                                                                            밁
                                                                                                                                                                                                                       ्र
                                                                                                                                                                                                                                                                                                                                                                     The present sequence is a DNA sequence related to the production of the covel thermostable / protease resistant Escherichia coli phytase CC described in the specification. The present invention relates to a novel formulation, comprising at least one polypeptide having phytase activity, CC where the polypeptide is a modified sequence (AEB7542) derived from the Escherichia coli K-12 appA phytase (AEB75419). The modification of the CC enzyme, comprising a series of mutations, improves the thermal tolerance CC and protease stability of the protein. The specification also claims a CC pharmaceutical composition; a kit; an immobilized phytase, a fertilizer or soil additive, a liquid supplement for preventing muscle cramps; a CC hydrating agent; a tissue culture or cell culture media; and a plant food additive, all comprising the novel phytase, and a method of reducing pollution and increasing nutrient availability in an environment or environmental sample by degrading environmental phytic acid. The novel carding supplement is useful for treating preventing or reversing osteoporosis or bone loss, and preventing muscle cramps. The method is useful for reducing pollution and increasing mutrient availability in an environment or environmental sample by degrading environmental phytic acid, where the environmental sample by degrading environmental phytic acid, where the environmental sample by degrading environmental phytic acid, where the environmental or environmental sample comprises a soil or a lody of water. The immobilized phytase is useful in foodstuffs for comprise a soil or a lody of water. The immobilized phytase is useful in foodstuffs for The CC present sequence is shown in the sequence listing but not discussed a sole or alsowhere in the servicion of the sequence is shown in the sequence of

The enzyme catalyses the liberation of inorganic phosphate from the phytate in phytate-containing foodstuffs and can thus be used to improve the nutritional value of phytate rich ingredients

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel dietary aids comprising sustained release biocompatible composition which comprises an agent (enzymes such as phytase, amylase, esterase, protesse) that assists in digestion. The biocompatible composition is effective upon oral consumption and release in the digestive tract of a subject. The dietary aids are useful for delivering enzymes, therapeutics, medicine and agents to an organism. The use of enzymes and other agents in digestive aids of livestock or domesticated animals not only improves the animal's health and life expectancy but also assists in increasing the health of livestock or in the production of foodstuffs from livestock. The present sequence is Escherichia coli phytase DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1323

                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                   The patent discloses recombinant bacterial phytase from Escherichia coli CC K12 appA phytase. The enzyme has phytase activity and improved thermal CC tolerance when compared with wild-type phytase. It has improved protease CC stability at low pH. The recombinant phytase is useful for improving the growth performance of an organism that consumes it, in CC treating animal digestive systems, in feed treatment processes and for in CC vitro purposes related to research, discovery and development. They are CC also used for generating accombinant digestive system life forms, for CC producing or manufacturing alcoholic and non-alcoholic drinks based on CC the use of moulds, grains and/or plants, in biopulping and bio- bleaching CC where a reduction in the use of environmentally harmful chemicals that CC are traditionally used in the pulp and paper industry is desired and in CC supplements, enzymes or therapeutic drugs for animals from the daily feed thus increasing the amount calories and nutrients present in the feed. The present sequence is a DNA encoding E. coli B phytase protein

RESULT 12
ADA19445
The invention relates to an isolated Escherichia coli polynucleotide CC encoding a phytase enzyme appearing as ADA19450 and having amino acids CC modification from W68E, O84W, A95P, K97C, S168E, R180Y, R926C or Y277D. CC Also included the E. coli appA gene ADA1949 (or an oligonucleotide CC derived from it) or its mutant sequence ADA19452, expression vectors, host cells, a method of improving nutritional value of a phytate-CC containing foodstuff by contacting the phytate-containing foodstuff with a pure phytase enzyme mutated phytase (where the phytase enzyme catalyzes the liberation of inorganic phosphate from the phytate in the phytate-CC containing foodstuff), a method to produce an animal feed containing a CC microbial phytase (comprising culturing the plant cell, plant part or plant under conditions where the nuclectide sequence is expressed and CC converting the plant cells, plants or plant into a composition for animal (cells, plant parts or plants in admixture with a phytate-containing foodstuff), a method to treat a human or an animal able to benefit from CC digestive enhancement by the activity of an exogenous phytase enzymes comprising administering to the human or animal the plant seed, plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-MAR-1999;

The phytate enzyme is useful for improving the nutritional value of phytate-containing foodstuff, in the production of animal feed and for enhancing digestion in humans and animals. The invented method improves thermal tolerance and protease stability. It also improves the feeding value of phytate rich ingredients. The present sequence encodes E. coli B wild-type phytase.
